PROFESSIONAL SUMMARY

System Engineer with ~2.7 years (32 months) of experience in Java and Spring Boot, building scalable microservices and REST APIs. Strong in writing clean, testable code with JUnit, working with RDBMS, and delivering reliable backend systems in collaborative environments. Adept at leveraging cloud technologies and CI/CD practices for efficient deployment.

SKILLS

Languages:	Java, SQL, Python
Backend:	Spring Boot, Spring MVC, Spring Data JPA, Spring Security, REST, SOAP
Databases:	MySQL, PostgreSQL
Cloud & DevOps:	AWS, Docker, Jenkins, OpenShift, CI/CD
Tools:	Git, Kibana, ELK Stack
Build Tools:	Maven
Core Concepts:	DSA, Design Patterns, Microservices, Event-Driven Architecture, Multithreading, Distributed Systems, System Design

EXPERIENCE

System Engineer | Tata Consultancy Services (TCS) | Pune, Maharashtra | *Aug 2023 – Present (Apr 2026)*

- Designed and developed Spring Boot microservices for high-volume financial transactions, enhancing transaction processing efficiency for digital wallets and prepaid virtual cards.
- Built and optimized REST APIs, achieving a 20–30% improvement in average response time through query tuning and structured exception handling.
- Implemented idempotent transaction mechanisms to ensure consistency and reliability in financial operations, reducing duplicate processing risks.
- Integrated multiple downstream banking systems using web clients, applying timeout, fallback, and retry strategies to improve failure recovery by 30%.
- Secured APIs with Spring Security and role-based access control, ensuring robust agent authentication and authorization.
- Reduced production issue resolution time by 40% through centralized logging and traceability using the ELK stack (Kibana).
- Maintained over 80% unit test coverage for core services using JUnit and Mockito, ensuring high code quality and reliability.
- Containerized microservices using Docker and implemented CI/CD pipelines with Jenkins, reducing deployment effort by 50%.

PROJECTS

Digital Wallet System

- Developed an orchestration layer using Java and Spring Boot microservices to manage transaction requests between agent applications and core banking systems.
- Handled critical financial scenarios such as success, failure, reversals, and idempotency to ensure consistency and avoid duplicate processing.
- Utilized HttpClient for service communication and RabbitMQ for asynchronous notifications, enhancing system reliability.

Data Architecture & Migration Initiative

- Contributed to the migration from legacy in-memory DataGrid storage to a relational database architecture using Java and PostgreSQL.

- Improved data fetch performance by 25–30% through in-memory caching and optimized batch processing strategies.
- Ensured data consistency and zero-loss migration during the system transition, enhancing overall data integrity.

BIAN Mapping AI Automation Tool

- Built a full-stack AI-powered platform using **Java Spring Boot** that maps core banking REST APIs to **BIAN (Banking Industry Architecture Network)** standard using **GPT-4o**, replacing a manual 4–8 hour architect process with a sub-60-second automated workflow
- Engineered a two-leg LLM pipeline: **Leg 1** uses GPT-4o Vision to parse API spec PDFs by rendering pages as images and extracting structured field metadata; **Leg 2** sends extracted metadata with a curated BIAN corpus to GPT-4o for semantic field-level mapping with confidence scoring
- Designed a conversational **React chatbot UI** with multi-source input (Swagger URL, Swagger file, PDF), human-in-the-loop PDF metadata review, and a real-time BIAN result card with compliance gap analysis and alignment scoring (0–100)

EDUCATION

B.E./B.Tech in Computer Science and Engineering

Government College of Engineering, Chandrapur | Aug 2019 – Jun 2023 | GPA: 9.56

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- Google Cloud Certified Generative AI Leader

ADDITIONAL

- Solved **120+ DSA problems** focusing on arrays, hashing, and graph-based problems
- Strong understanding of **scalable system design and backend performance optimization**
